Mithat Konuk ミテャト コヌク

Backend Engineer

Munich, Bavaria, Germany

Summary

Software Engineer with 10+ years of experience. Hands-on experience with entire software lifecycle. Experience creating APIs and features, architecting and implementing object-oriented and distributed systems, Spring, Quarkus, interacting with customers, and designing and analyzing algorithms. Strong focus on design elegance and software reuse, using open source tech stacks, and hope to take a chance to commit to open source projects. Experience high throughput web applications and system designs. Interesting in API Design, Systems Architecture, Distributed and Concurrent Systems, Microservices, and Containerization.

Personally as a friendly, a good communicator, a hard worker, a love to take responsibility.

Experience

Entirely

Software Engineer

March 2025 - Present (1 year 7 months)

Munich, Bavaria, Germany

In exciting news, I'm happy to announce that whilst I will still be in my position of a Senior Software Developer with Censhare, I will also be part of Entirely as part of their Research & Development Team! Founded by Marmind, Censhare, Elaine, and Facelift, Entirely is building a whole new world of marketing technology—more than a product, more than a platform. An open, evolving ecosystem designed to scale, adapt, and drive real impact. Entirely new, Entirely Martech, Entirely connected.

censhare

Back End Developer

August 2021 - April 2025 (3 years 9 months)

Munich, Bavaria, Germany

Sqills

Software Craftsman

March 2021 - August 2021 (6 months)

Amsterdam, North Holland, Netherlands

Responsible to improve the architecture of in-house IT solutions and help Java development teams, to deliver high quality and reliable software to meet the business needs of S3 Passenger suite. The S3 Passenger suite offers seat reservation, (open) ticketing, distribution and revenue management functionality which enables rail and bus operators to:

- Lower their distribution costs
- Increase customer satisfaction
- Decrease time to market

We are currently converting monolith application to maintainable micro-services with docker containers, creating stand-alone apps that collaborate with each other. It also involves introducing new metrics about the applications and integrating to monitoring tools that can generate notifications on defined violations.

sahibinden.com

Software Craftsman

August 2018 - March 2021 (2 years 8 months)

Istanbul, Turkey

- store warning system
- auctions acceptance system.
- Maintained existing source code and fixing bugs

sahibinden.com which is the largest online classified and high traffic website company in Turkey. (10 Gbps+ max traffic, monthly 1,500,000,000+ page view and monthly 43,000,000+ unique visitors)

Technologies

- Java 11, Kotlin, Spring Boot, Spring Framework, Cassandra, Spark, MySQL, Memcached, Redis, AngularJS, Thymeleaf, JSP, JSF, Primefaces, REST, Tomcat, CSS, HTML, GIT, JUnit, Mockito, Selenium, Jira, New Relic, Grafana, Python, Shell Scripting

NETAŞ

4 years 5 months

Senior Software Engineer

September 2016 - June 2018 (1 year 10 months)

Istanbul, Turkey

VGate Voip firewall

V-Gate is Voip Security Platform for protecting customers for fraud and variety of hacking attacks on network.

Technologies

- Implement Daemon Service creation scheduling batch jobs in java core
- Implement Scheduler task for restore and update data servers
- Implement Serialization Task for different machine communication
- Implement Reporting and Analysing Service for customer monitoring
- Implement customer data collection on VoIP call data mediator agent
- Implement alarm service filtering and rules

Senior Software Engineer

September 2016 - February 2018 (1 year 6 months)

Istanbul, Turkey

License Management System

Creation of License for customer and monitoring expiration times

Technologies

Written in java EE, Spring Boot, Postgresql , AES encryption algorithm.

Senior Software Engineer

February 2016 - February 2018 (2 years 1 month)

Istanbul, Turkey

Mediation Data Flow

Mediation Service is created with pure java core to collect customer telecommunication data different type data collection project ,this project contains two parts mediation server and mediation server agent

Mediation Server is serve as api gateway and each request and each of different data can flow on the special channel

Mediation Server Agent is located on customer server daemon service and collect telecommunication data from customer and encrypt sent to mediation server via special channel and adapters

They can work individual ,When agent checked network and found mediation server as in configuration setted ,connect and communication start.Communication side used zookeeper and kafka.There is adapters created for different data type and converters data can be convert and send to transmitter .Transmitter is like channel in mediation service to pass data to another worker / adapter

Mediation Service agent is has abilities to data sending block size supported ,Timeout and wait condition and then sent features supporting Customers have different telecommunication servers and different data type each data of datas have to be common data side to be analysis for fraud so this requirement made to create this project and I had full of responsible for this project implementation ,design, testing.

Technologies

Java Core , Postgresql ,Git

Software Engineer

February 2014 - February 2016 (2 years 1 month)

Istanbul, Turkey

OneM2M Telecommunication Gateway project

This project provide to service provider companies to use m2m technology data flow that written in C,C++,Java core.I had responsible for changing COAP protocol to HTTP as bidirectional

TCP/IP, TCP/UDP socket programming over CoAP and HTTP binding.

GVP –C20-OAM Project

Implementation Back End Service OAM (Java JAX-RS)

Jira and problem solving (fix)

Using ORM (Hibernate,Java Persistence)

Using SVN

Customer requirement Feature Integration

C15 Telecommunication System

This project is C15 Telephone Service SL1 Programming Language IDE implementation for

Code suggestion

Keyword suggestion,

Creation specific C15 project mechanism which is depending on programming language

Globit Global Bilgi Teknolojileri A.S.

Software Engineer

July 2014 - October 2014 (4 months)

Istanbul, Turkey

Global Globit is company building OAS (Operation Administration Systems) and supporting customers

Timesheet project (Saas)

This application can store customer performance and salaries and how many days working and which currently departman is responsible .

Technologies

Using java RS , Vaadin Framework for UI side , Postgresql,Pure Sql

License Management System

Java Core written application encryption and monitoring licenses

Technologies

Java core,Postgresql,Restful Api Design with JavaX

PHI Tech Bioinformatics

Software Engineer

June 2013 - August 2013 (3 months)

Istanbul, Turkey

Implementation of BLAST algorithm for protein sequence and human DNA sequence comparison algorithm.And we prepare essay for this algorithm and published at oxford journalist
